

**ALSCO® Aluminum building products** are environmentally friendly. As a vertically integrated manufacturer of aluminum building products, ALSCO optimizes every step in the manufacturing process, resulting in superior aluminum building products.

ALSCO products are made from 96% recycled post-consumer aluminum feedstock: beverage cans, foil and other carefully selected recycled aluminum. We melt, alloy, cast and roll the aluminum to make high-quality building product sheet which is used to produce all of the residential trim products found in this ALSCO Product Specification Guide.

## FACTS:

- **Your decision to use green products impacts our environment and can save you money**
- **Recycling aluminum saves 95% of the energy needed to refine new aluminum from ore**
- **Aluminum can be recycled over and over while maintaining all of it's original properties**
- **ALSCO Metals Corporation can help support your LEED or other green projects with sustainable aluminum building products**
